

KAMYAAB

Verified Work. Trusted Hands.

A trust-based job-matching platform connecting verified blue-collar workers with households and small businesses across Pakistan.

BUSINESS MODEL	STAGE	LAUNCH MARKET
Commission-Based	Concept / Pilot	Karachi

BUSINESS PITCH DOCUMENT

Team: Straw hats | Internship Product Pitch | 2026

1 Executive Summary

Kamyaab is a trust-based job-matching platform connecting verified blue-collar workers — electricians, plumbers, carpenters, drivers, tailors, and cooks — with households and small businesses across Pakistan. The platform uses voice-based job posting, AI-driven smart matching, and a two-way rating system to solve a problem that has never had a proper digital solution: finding and hiring reliable blue-collar labor.

Kamyaab launches in Karachi with a single-neighborhood, single-category pilot before expanding citywide and then nationally.

2 Problem Statement

Core problem: Households and small businesses in Pakistan have no reliable, verifiable way to find blue-collar workers. Hiring happens through word-of-mouth or informal labor chowks, with no record of skill, reliability, or past performance on either side.

- No centralized platform exists for verified blue-collar hiring
- Employers face frequent no-shows, poor-quality work, and scams with no recourse
- Workers lose income during gaps between jobs due to lack of structured demand
- Existing platforms (Karsaaz, Hire-Workers.pk) serve smartphone-owning, self-manageable workers — leaving the larger keypad-phone, daily-wage segment unaddressed

Problem Severity Scorecard

Dimension	Score	Evidence
Frequency	9/10	Home/business repair and hiring needs arise weekly across nearly every household
Urgency	8/10	Emergency needs (AC down, pipe burst) demand same-day response
Cost of current solution	7/10	Scams, redone work, and wasted time carry real financial cost
Market size	9/10	[Placeholder — insert blue-collar workforce estimate, e.g. PBS labor force data]
Growth	8/10	Smartphone and digital payment penetration rising 12–15% CAGR (PTA)

Note: placeholder ratings — refine with sourced PBS, PTA, or ILO informal-economy figures before finalizing.

3 Solution

Kamyaab operates as a two-sided platform, purpose-built around the reality that most workers do not carry a smartphone:

- **Client side (app):** Post a job by voice or text (Urdu/Roman Urdu) → AI matches the best-fit worker by skill, location, availability, and rating → job is tracked → both sides rate each other after completion
- **Worker side (agent-onboarded):** Verified at registration by a local agent (CNIC and reference check) → receives job offers via SMS or call, no app required → confirms and completes the job

4 Product Features

- **Voice-based job posting & search** — removes the typing barrier for both non-technical clients and workers
- **AI smart matching** — ranks workers by skill fit, proximity, availability, and rating instead of a flat list
- **Verified profiles** — agent-led onboarding with CNIC and reference verification
- **SMS/call-based worker interface** — works on keypad phones, no app download required
- **Two-way rating system** — builds accountability on both sides
- **Urgent job flag** — priority routing for same-day and emergency requests

5 Target Market

- **Primary:** Urban households and small businesses in Karachi (Phase 1), expanding to Lahore and Islamabad
- **Demand side:** Smartphone-owning clients — app users
- **Supply side:** Blue-collar workers regardless of phone type — agent-onboarded
- **Market sizing:** [Placeholder — Pakistan's informal labor sector represents a large share of total employment per ILO/PBS data; insert specific figure once sourced]

6 Business Model

Revenue Stream	Description	Priority
Commission per job	Small % of job value on successful completion	Primary
Priority listing	Workers pay a small fee for higher visibility in matches	Secondary
B2B partnerships	Housing societies/small businesses use Kamyab as recommended vendor list	Phase 2

Illustrative Unit Economics

Metric	Estimate
Avg. commission per job	Rs. 50–150
Avg. jobs per active worker / month	8–12
CAC — worker onboarding (via agent)	Rs. 200–400
CAC — client (organic + referral)	Near-zero

Note: placeholder estimates — refine with real pilot data once available.

7 Go-To-Market Strategy

- **Phase 1 (Pilot):** One Karachi neighborhood, 1–2 worker categories (e.g., electricians, plumbers), 20–30 agent-onboarded workers
- **Phase 2:** Expand categories and coverage within Karachi
- **Phase 3:** Lahore and Islamabad rollout
- Growth via local registration drives, word-of-mouth, and housing-society partnerships — near-zero paid acquisition on the client side

8 Competitive Landscape

Platform	Focus	Gap Kamyab Fills
Karsaaz	Smartphone-owning technicians, app-managed profiles	Doesn't serve keypad-phone daily wagers

Platform	Focus	Gap Kamyab Fills
Hire-Workers.pk	Quote-based worker directory	No AI matching, no voice interface
TApp / Tasdeeq	B2B worker background verification	Not a hiring/matching platform

“Existing platforms serve workers who can already manage a smartphone profile. Kamyab serves the workers and clients who can’t — the larger, underserved half of this market.”

9 Risks & Mitigations

Risk	Level	Mitigation
Disintermediation (client/worker bypass app after 1st job)	Medium	Dispute resolution, replacement guarantee, in-app rating history as ongoing value
Cold start (two-sided market)	Medium	Single-neighborhood, single-category pilot before expanding
Low willingness to pay commission	Medium	Start with low commission %, prove value before raising
Verification fraud	Low–Medium	In-person agent verification, CNIC + reference check
Agent onboarding cost	Medium	Start small, reinvest early commission into agent network

10 Team

Kamyab — Team Straw hats

AS	Muhammad Asad Siddiqui	<i>Frontend Developer (React)</i>
A	Muhammad Abdullah	<i>Backend Developer (Node.js)</i>
HZ	Huriya Zafar	<i>QA Engineer</i>
WA	Wajid Ayub	<i>Mobile App Developer (React Native)</i>
N	Nandni	<i>Backend Developer (Node.js)</i>

11 Roadmap

Phase	Focus
Phase 1 — MVP	Core matching platform, voice posting, agent-led worker onboarding — Karachi pilot
Phase 2	Material/supplier bundling (paint, hardware) alongside labor
Phase 3	Multi-city expansion, B2B housing society partnerships

12 Vision & Next Steps

Kamyaab is designed as a real, sellable product not just an internship exercise. If validated through this pilot phase, the roadmap is to:

- Launch a live pilot with real workers and clients in one Karachi neighborhood
- Prove the trust/matching loop works at small scale before expanding
- Explore partnerships with housing societies and small businesses as early B2B customers
- Position for future investment or revenue-sharing opportunities as the platform scales
